

CHILDREN PROP

Button

`props.children`

An empty "hole" that can be filled by any JSX the component receives as children

Children of Button, accessible through `props.children`

Previous

```
<Button onClick={previous}>
  <span>👉</span> Previous
</Button>
```

PARTY

```
<Button onClick={next}>
  <span>🎉</span>PARTY<span>🎉</span>
</Button>
```

- 👉 The children prop allow us to **pass JSX into an element** (besides regular props)
- 👉 Essential tool to make **reusable** and **configurable** components (especially component **content**)
- 👉 Really useful for **generic** components that **don't know their content** before being used (e.g. modal)
