

COMPONENT COMPOSITION

COMPONENT COMPOSITION

```
function Modal({ children }) {  
  return (  
    <div className="modal">  
      {children}  
    </div>  
  )  
}  
  
function Error() {  
  return <p>This went wrong!</p>  
}
```

Success is passed into Modal: we can REUSE Modal.

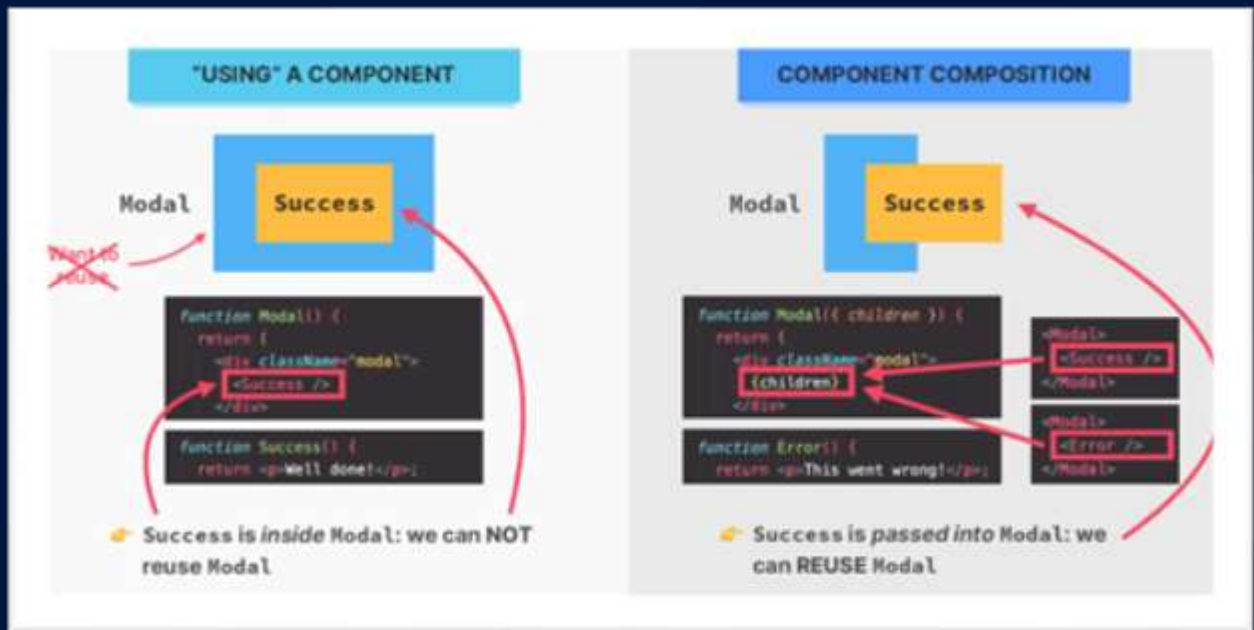

👉 Component composition: combining different components using the `children` prop (or explicitly defined props)

WE COMPONENT COMPOSITION, WE CAN:

- 1 Create highly reusable and flexible components
- 2 Fix prop drilling (great for layouts)

Possible because components don't need to know their children in advance
