

REFS TO SELECT DOM

```
import React, { useEffect, useRef } from 'react'

const Search = ({ query, setQuery }) =>
{
  const inputEl = useRef(null);
  useEffect(() =>
  {
    const callback = (e) =>
    {
      if(document.activeElement === inputEl.current)
      {
        return;
      }

      if(e.code === "Enter")
      {
        inputEl.current.focus();
        setQuery("");
      }
    }

    document.addEventListener("keydown", callback);

    return () =>
    {
      document.removeEventListener("keydown", callback);
    }
  }, [setQuery]);

  return (<input className="search"
    type="text"
    placeholder="Search movies..."
    value={query}
    onChange={(e) => setQuery(e.target.value)}
    ref={inputEl} />
  );
}

export default Search;
```
